

Adding a private computer to the UNIL's inventory

In the event that you would not have access to a computer provided by the University, it is possible to ask for the use of your private computer. Each application must be approved by the director of the department before being considered by the [FBM IT Service](#). Please contact us before beginning proceeding.

It is compulsory to add your private computer to the inventory if you want to use the softwares provided by the university. Once your computer is registered in the inventory of the UNIL, you remain the owner, and assume any costs in case of failure. In order to do this, please contact us.
