

Crypto (VPN)

Description

For security purposes, the access to some UNIL or FBM resources is restricted. To access, your equipment (computer, tablet, phone) must be connected on the UNIL network.

You can **work from outside UNIL** as if you were at UNIL using the UNIL's VPN ([Virtual Private Network](#)): crypto.unil.ch. This secured connection allows you to access all FBM resources (NAS, FBM applications, etc.) and to freely use the internet on several Swiss train stations and some hotels. **Pulse secure** is an application installed by default on every FBM equipment that allows you to configure VPN access on any kind of equipment (OSX, Windows, Linux, Android, iOS, Windows phone).

Installing and starting the VPN

- [VPN installation guide](#) (fr)
- [VPN on CHUV network](#) (restricted access)

For more information, please refer to the [documentation of UNIL's IT Center \(Ci\)](#).

Working with VPN connection

Once you get the VPN connection, you can start to work as if your were working on the UNIL network. For example, you can:

- [access your files on NAS](#)
- [access the PyRAT application](#)
- [access the FBM applications](#)
