

How to prevent your Mac from automatically upgrading to Mac OS 10.15 Catalina

Product

	Name	Version
System	OSX	Mac OS 10.12 (Sierra) and previous version

Description

After system updates, it often happens that previously installed software becomes incompatible.

The roaringapps.com website lists all 32bit software that will NOT be compatible with Catalina Mac OS 10.15:

<https://roaringapps.com/collections/list-of-32-bit-macos-apps>

This article explains how to prevent your Mac from automatically upgrading.

If you're using Mac OS 10.12 (Sierra) and previous versions

- Open System Preferences

- Select "App Store"

- Make sure the box "Install macOS updates" is **unchecked**.

If you're using Mac OS 10.13 (High Sierra) or 10.14 (Mojave)

- Open System Preferences

- Open System Preferences

- Select "Advanced"

- Make sure the box "Install macOS updates" is **unchecked**.

osx, update
